## FLANGED CAST IRON Y-STRAINER

## T-19

High-strength cast iron construction resists distortion from pipeline stresses
A larger straining area provides more effective single-pass debris filtration and entrapment, enhancing downstream component protection

Uni-directional flow. Can be installed horizontally or vertically, where the screen cap must be positioned downward. In the vertical position, the media must flow downward
Equipped with a 304 stainless steel perforated strainer that is more rigid than traditional mesh strainers and more resistant to collapse under high-velocity flow or excess debris applications
All sizes are furnished with a square-head closure plug
Gasketed strainer cap is bolted to the body, for easy removal and servicing of the perforated strainer

## Working Pressure, Non Shock (PSI)

Cold working pressure (CWP): 200 psi
Saturated steam (WSP):
125 psi to $340^{\circ} \mathrm{F}$

## Strainer Type

2" to 4"
$5^{\prime \prime}$ to $8^{\prime \prime} \quad$ Cylindrical, $1 / 8^{\prime \prime}$ diameter roundperforation sheet steel
